### Description

**Ultra-compact isolated DC/DC converters (modules)** are especially designed for industrial applications and harsh environment operation. These compact units (30 x 20 x 10 mm) have output power up to 10 W and wide operating temperature range between -60...+110°C, for special order – up to 125°C.

These modules are available with one or two **galvanic isolated** channels, can be switched on/off by a signal, have full protection complex against over current, shorting and overheating and can be connected in parallel or in series.

These modules are built using especially designed electronic components and sealed with heat-conducting potting material. They have wide operating temperature range and thermal protection chip. These modules undergo special thermal and limit tests, including burn-in-tests with extreme on/off modes. They are available in metal cases with mounting flanges.

\* All specifications are valid for normal climatic conditions, Uin.nom., Iout.nom., unless otherwise stated.

\*\* Parameters are stated for the information purposes and could not be used at long term work, exciding maximum output current, at work outside of a range of operating temperatures.

\*\*\* For other output voltages the maximum output capacity is calculated from the fact that  $C_{max} \times U_{out}^2$  is a constant.
