

## DC/DC converters TESZ160 series

### Features

- Class: Industrial
- Cases with mounting flanges; or copper case (optional)
- Parallel operation
- Feedback from load
- Output current up to 20 A, output power 160 W; one output channel
- Input voltage ranges: 14,4...34 VDC, 22...51 VDC, 29...67 VDC, 43...101 VDC, 58...135 VDC, 66...160 VDC
- Protection against input overvoltage and surges according to EN50121-3-2, EN50155, IEC60571, RIA12 up to 500 VDC with duration of 20 msec (for input network 110 VDC)
- Power density up to **1332** W/dm<sup>3</sup>
- Low profile 13 mm design
- Case operating temperature range: -60°C...+125°C
- Magnetic feedback without optocouplers
- Output voltage adjustment, remote on/off
- Max capacitance 9500 µF for U<sub>out</sub>=15 VDC

### Description

**DC/DC converters with protection from transient voltage surges on the input** are especially designed for industrial applications and harsh environment operation. Modules are perfect for power systems mobile and stationary objects, powered by a generator. Modules are able to operate in a wide temperature range (-60...125°C). The absence of optocouplers in the converter's circuit allows it's operation in conditions of ionizing radiations and high temperature during units entire lifetime. These modules can be switched on/off by a signal, have full protection complex against over current, shorting and overheating and can be connected in parallel or in series.

These modules are built using specially designed electronic components and sealed with heat-conducting potting material. They have wide operating temperature range and a thermal protection chip. These modules undergo special thermal and limit tests, including burn-in-tests with extreme on/off modes. They are available in metal cases with mounting flanges.

An operating unit can withstand drop of input voltage in relation to the normal input voltage, and in many cases the module is able to provide needed output power when the input voltage decreases 10-30% compared to the normative.

Upon customers' request this modules can be produced in copper cases (covered by "Black chrome"), allowing its installation on aluminum heat sink and providing a positive effect on the modules EMC and heat transfer.

Input transient protection 110 Z	500 VDC @ 20 ms 350 VDC @ 40 ms 200 VDC @ 1 s
Input filter	In accordance with EN50121-3-2, EN50155
<b>Output specifications</b>	
Output voltage adjustment	±5% Uout nom.
Instability of output voltage in accordance to changing of output current from 10 to 100% for single output model	±6%
Ripple and noise (peak-to-peak) (20 MHz)	<2% Uout nom.
Short circuit protection**	auto repair
Overvoltage protection**	<150 % Uout nom.
Over current protection level**	Pout ... 1.8·Pout
Remote On/Off	Shuts down outputs by applying 0...1,1 VDC or connection of output «ON» and «- IN», I≤5 mA
The maximum output power without the heatsink, Tamb=50°C	100 W
<b>General specifications</b>	
Case temperature (operating)	-60°C ...+125°C ***
Case temperature (storage)	-60°C ...+125°C
Case temperature power decrease (natural convection)	See diagram (dashed, dash-dotted curve)
Case temperature without power decrease with heat sink	See diagram (solid curve)
High humidity	100% @35 °C
Thermal resistance case — environment without heat sink	3 °C/W
Conversion frequency	300 kHz typical
Insulation voltage input/output	=3000 VDC
Insulation voltage input/case	=2200 VDC
Insulation voltage output/case	=1500 VDC
Isolation resistance @ 500 VDC	>20 MOhm
EMC standards	EN 55022, class A with additional filter
Safety standard	IEC/ EN 60950, EN50116
Surge and Transient Protection	EN50155, IEC60571, RIA12
Typical MTBF (Tcase = 50°C; Pout = 0,7 Pout max)	50 000 hrs
Cooling metod	Free air convection or forced air cooling
Weight (max)	250 g

\* All specifications are valid for normal climatic conditions, Uin.nom., Iout.nom., unless otherwise stated.

\*\* Parameters are stated for the information purposes and could not be used at long term work, exciding maximum output current, at work outside of a range of operating temperatures.

\*\*\* Thermal protection chip starts operating at 118°...125 °C.

## Output power vs an ambient temperature at input voltage =43...101 VDC (copper case)

Dropping parts of the dashed and dash-dotted curves are in accordance with the **maximum temperature of the case**. Output power must not exceed the values which are limited by corresponding curve for a given ambient temperature. Modules can be used without a heat sink only when screwing them heat conductive plate with thermal paste and with the length and width not less than case size and thickness of not less than 3 mm.
