

Ultra-compact isolated DC/DC converters (modules) are especially designed for industrial applications and harsh environment operation. These compact units (58 x 40 x 10 mm) have output power up to 150 W and wide operating temperature range up to -60...+130°C.

These modules are available with one, two or three channels, can be switched on/off by a signal, have full protection complex against over current, shorting and overheating and can be connected in parallel or in series.

These modules are built using especially designed electronic components and sealed with heat-conducting potting material. Completely replace the previous generation modules TESD60.

** Parameters are stated for the information purposes and could not be used at long term work, exciding maximum output current, at work outside of a range of operating temperatures.

*** For other output voltages the maximum output capacity is calculated from the fact that $C_{max} \times U_{out}^2$ is a constant.

**** Typical efficiency - for input 12 VDC (input range 12 W), 27 VDC (input range 27 W) and output 5 VDC, output power is 0.7*Pmax, Tcase +60°C.
